

ABSTRACT

Biology is one of the important subjects in school. Biology discusses all living things on earth ranging from microorganisms to the largest organisms on earth. Biology also has many benefits in various fields of life. However, many students lack interest in biology. Teaching and learning activities in biology in the form of lengthy material descriptions can be a challenge for students. Students sometimes become bored and lazy to learn.

Comics is one of the media currently popular among teenagers. Besides containing entertaining stories and pictures, comics can also be an easy to understand visual communication medium.

In designing the educational media, the writer uses quantitative research methods. By using the method of questionnaire, interviews, and study documents. With the existence of educational media that can be favored by high school students will increase their knowledge of biology subjects.
