

LIST OF FIGURES

Figure 1.1 Unlicensed Band in 2.4 GHz is crowd while 5 GHz gives a chance	14
Figure 1.2 Massive internet penetration in Indonesia	15
Figure 2.1 Evolution of 3GPP standard since LTE [9]	19
Figure 2.2 LTE Architecture [13]	21
Figure 2.3 Carrier aggregation framework in LAA [12] [14]	22
Figure 2.4 LAA trial architecture [5]	23
Figure 2.5 Basic steps of CBA [30]	35
Figure 3.1 Framework Research	38
Figure 3.2 Map of Bandung city	39
Figure 3.3 LTE sites deployed in Bandung from MNO X case	40
Figure 3.4 Capacity Analysis flowchart.....	41
Figure 3.5 Coverage Analysis flowchart.....	42
Figure 3.6 Service and Business Flow of LTE-LAA provision.....	43
Figure 4.1 Comparison of Required Traffic Capacity and Existing Served LTE Capacity	51
Figure 4.2 Number of LAA sites	52
Figure 4.3 Outdoor Coverage Prediction in malls (TSM and Ciwalk), and campus (ITB)	57
Figure 4.4 Outdoor Coverage Prediction on campus (UPI and AH Nasution street)	58
Figure 4.5 Outdoor Coverage Prediction in the dense area (Kiara Artha Park, Bandung city square, and Braga street).....	58
Figure 4.6 Outdoor Coverage Prediction in dense area (<i>Balai Kota Bandung</i> and <i>Taman Lalu Lintas</i>).....	58
Figure 4.7 Business canvas model from MNO perspective in LAA business	59
Figure 4.8 Net Present Value for ten years of a business lifetime	63
Figure 4.9 IRR is a discount rate value that gives $NPV = 0$	64
Figure 4.10 Cumulative Net Cash Flow represents BEP in 7 years 3 months.....	65
Figure 4.11 Profitability Index is obtained by dividing Cash In with Cash Out.....	66
Figure 4.12 Spider Web for analyzing the impact on business in Sensitivity Analysis....	67
Figure 4.13 Number of LAA penetration comparison with its threshold	69
Figure 4.14 Comparison based on Ratio of LAA-enable Device Penetration difference .	69
Figure 4.15 Comparison based on addition growth of LAA device each year difference	70
