

LIST OF FIGURES

1.1	5G services classified by ITU-R.	1
2.1	Channel comparison between fast fading and PDP of Telkom University 5G channel model.	6
2.2	Structure of convolutional codes with polynomial of $3[5, 7, 7]$ with $R = \frac{1}{3}$	7
2.3	Bipartite graph of LDPC codes	8
2.4	Bipartite graph of 5G NR QC-LDPC codes based on BG1	9
2.5	Illustration of C-BPSK.	10
2.6	Illustration of cyclic prefix.	11
2.7	(a) Transmitted Signal (b) Received Signals.	13
3.1	System model of Telkom University 5G channel model.	19
3.2	Flowchart of proposed framework to calculate the 5G Telkom University Channel Model.	20
3.3	Measurement location of Telkom University 5G channel model.	21
3.4	Schematic Electrical Circuit Sensor for Environment Measurement.	22
3.5	Open source 5G channel model simulator by New York University.	23
3.6	Original and resulting delay profile method.	26
4.1	Channel comparison between fast fading and PDP of Telkom University 5G channel model.	30
4.2	Representative PDP of Telkom University with maximum temperature effects.	30
4.3	Representative PDP of Telkom University with minimum temperature	31
4.4	Representative PDP of Telkom University considering maximum temperature.	33
4.5	Representative PDP of Telkom University with minimum temperature.	33
4.6	CDF of capacity of Telkom University 5G channel model.	34
4.7	Outage performance of Telkom University 5G channel model with temperature effects.	35
4.8	FER performance of 5G Telkom University channel model with maximum temperature.	37

4.9	FER performance of 5G Telkom University channel model with minimum temperature.	37
4.10	BER performance of 5G Telkom University channel model with temperature effects.	39
4.11	BER performance of 5G Telkom University channel model with minimum temperature.	39
