

## Abstract

The Quran is the Muslim holy book that contains many words in it. This makes it difficult for ordinary people to find connections between words in the Quran. For examples like the word مَعْرُوف (good deeds) which have a connection with the word عَفَا (forgive) because in the Quran both words have a connection in the words of forgiveness is one of the good deeds. At present, there are still rarely found dictionaries, encyclopedias or thesaurus of the Quran vocabulary that explain the interrelationships of words in the Quran. This study discusses the interrelationship of words in the Quran and the future is expected to help in finding the interrelations between verses. The method used in this study is a method with a distribution-based equality approach based on Continuous Bag of Word (CBOW). The use of the CBOW method produces a precision value of 98% based on the results of the system output with the correction from linguists.
