

ABSTRACT

Integrated Islamic Schools (SIT) are essentially schools that implement the concept of Islamic education based on the Qur'an and Sunnah. The operational concept of SIT is an accumulation of the process of civilizing, inheriting and developing Islamic teachings, Islamic culture and civilization from generation to generation. The term "Integrated" in SIT is intended as an amplifier (taukid) of Islam itself. The point is that a whole, integrated, not partial Islam, syumuliah is not juz'iyah. This has become the main spirit in the movement of proselytizing in the field of education as "resistance" to the understanding of secular, dichotomous, juz'iyah. Based on observations of the Gowa IT Al-Fityan Boarding School SMA, it has not been able to optimally carry out the high school education function because there are still many weaknesses and shortcomings. Some weaknesses and shortcomings include the lack of school facilities to accommodate the teaching and learning process so that it has not been able to optimally carry out educational functions, the number of class students and students exceeds the capacity limit so that learning activities become less effective, relationships between spaces and spatial layout are not neatly arranged thus affecting the chaotic flow of students, staff and visitors, the atmosphere of the space that does not yet reflect the characteristics of the Integrated Islamic School, and the lack of conditional arrangements (escort, lighting and acoustics) in some rooms. To resolve and resolve the weaknesses mentioned above, it is not possible to be resolved in the school building or existing. For this reason, it is necessary to build a new building in the form of New Design. The new building that will be built will refer to the standards and results of comparative studies in three Islamic-based schools, the Daarut Tauhiit Islamic Boarding School in West Bandung, the Al Ma'soem Foundation, and Cahaya Rancamaya Islamic Boarding School Bogor.
