

ABSTRACT

Fine Arts is compulsory education in elementary schools as a medium to educate children's creativity. Fine Arts Education develops drawing skills, create awareness of local culture, develops the ability to appreciate fine arts, and provides opportunities to actualize themselves, one of which is for 6th grade students at SD Negeri 2 Grujugan, Banyumas. Therefore we need the right learning method so that the material can be presented properly. Video media is included in the category of new media arts whose development influences teaching media. With this workshop learning through video media it is hoped that it can become a reference for implementing and creating creative and innovative art learning activities. This can help in the selection of learning methods and the development of art subjects. The research method that researchers use is a qualitative method. The results obtained from this study include: to identify effective learning methods that can be applied in art learning for elementary school students, describe the application of art learning methods for elementary school students, and realize the appreciation and creativity of children towards the creation of art.
