## ABSTRACT

This study aimed to find out how green purchasing behavior is different for male and female consumers at Work Coffee Bandung. This study is a quantitative study, with survey methods, with descriptive and comparative characteristics. The population of male and female consumers at Work Coffee Bandung is unknown precisely so the sample was determined with a formula of 100 respondents. The measurement scale in this study uses a Likert scale. The sampling technique used in this study is non-probability sampling using Purposive Sampling. Data collection was conducted through a questionnaire with locations in Bandung City. Data analysis techniques use descriptive analysis, normality, and different Independent Sample Ttest.

The results show that green purchasing behavior among male consumers is in the good category and the female category is very good. And it shows that there is a significant difference between the green purchasing behavior of men and women at Work Coffee Bandung. With a mean for male consumers of 61.10 and female at 64.88. From the hypothesis test with the independent sample T-test results. The 2 tails obtained were 0.006 which is smaller than 0.05 then it can be concluded that there are significant differences between male and female consumers at Work Coffee Bandung.

Keywords: Green marketing, gender, green purchasing behavior
