

ABSTRACT

Amanah *Laundry* is a business engaged in laundry services located on Jalan Tonjong Bojonggede, Bogor. In carrying out financial records and financial reports, Amanah *Laundry* still uses the method manually, which is recorded in the financial book. In this way it is considered less efficient in financial management because mistakes can occur namely the difference between manual calculations and actual events. In addition, the process of recording financial data takes a long time. Based on this background, need a new system that is able to give solution the problems of financial data processing that is done in real time. So, it can help the admin or the finance department in recording income and expenditure and recording financial data. The application created is named "*My Ficord*" or can be called the My Financial Record which means My Financial Record. "*My Ficord*" application is implemented based on website using PHP programming language and integrated with MySQL database. The method used in making the website is the agile development method. The method with the Scrum model is a method that is suitable for the user, because the user is always involved in the process of developing the system program. So that quality system development activities in a short time, this Scrum method can be used by programmers to solve user needs. So that user needs are met significantly.

In the end, the result of making the application "*My Ficord*" has a feature of recording income and expenditure and recording financial data. Financial statements such as profit and loss and balance sheet. For financial statements can be seen per day and per month accurately and quickly. This application "*My Ficord*" has been tested using Blackbox Testing and ISO: 9126 software quality testing which means that this application can be used for general purposes that require recording and financial statements of the company.
