

ABSTRACT

This research is backed by the problem of good corporate governance (GCG) in Perum Bulog that has not been in accordance with the expectations of the company. Results of the implementation of the assesment have tentended to increase over the last 3 years, but the increase has not reached the company's target. This research will prove the influence of risk management and code of conduct to GCG. The purpose of this study is to determine, test and analyze the effect of risk management and the code of conduct on GCG in Bulog West Java Regional Division, for both partial and simultaneous influences.

This research uses quantitative methods with descriptive analysis research type. The sampling technique used in this study is the saturation sampling technique, which consists of all employees of the Bulog West Java Regional Division with a total of 63 people. Data were analyzed using descriptive analysis and multiple linier regression analysis.

The results show that risk management partially affected GCG by 17,2%, and code of conduct partially affected GCG by 45,5%. Simultaneous results showed that the risk management and the code of conduct together affect the GCG by 62,8%.

Keyword: Risk Manajemen, Code of Conduct, GCG.
