

## **ABSTRACT**

Early Childhood Education (PAUD) is busy and widely discussed by today's parents. Good Early Childhood Education is a thing important thing to consider to determine the future of a child. Early Childhood Education (PAUD) is an educational level coaching efforts, aimed at children from birth until the age of six as well as through the provision of educational stimuli to help physical and spiritual growth and development so that children have readiness in entering further education, which is held on a formal path and non-formal. So PAUD is very important for growth and development child stimulation.

The guardians of students competed to find the best PAUD schools for their baby. The guardians of students or parents do not want to waste it Golden Age opportunity for their baby. Golden Age is the golden age of children which is an important time to optimize growth and its development. Golden Age itself is the time of a capable child absorb and learn what is around it very rapidly and perfect.

So that with all the wishes of the guardians of these students, raises the desire to design something using the function approach. The functional approach is related to functional according to needs. Because aged 0-6 years, a child needs an object, furniture, or room that can stimulate motor development and stimulation of children. So the function approach in PAUD schools is very important.

Adequate facilities in accordance with standardization and minor modifications can increase stimulation of child development and enhance creativity child. By conducting comparative studies and literature studies, it was formed adequate and appropriate standardization facilities intended for children 0-6 years old. So that children grow into creative, innovative, and active individuals. Enhancing the development of children's stimulation with facility and interior methods which has been redesigned to become better as the main foundation in the discussion this.
