

ABSTRACT

SHELTER FACILITIES DESIGN FOR ALUN-ALUN KOTA BANDUNG

The role of public space as an element of the city can provide its own character, and in general has the function of social interaction for the community, people's economic activities, and a place of cultural appreciation. One of the public spaces in Bandung is the Bandung City Square. Overall, the Bandung City Square meets the criteria for good public space facilities, but the Bandung City Square still lacks some facilities, for example shelter. Visitors need shelter facilities that are comfortable and have aesthetic value, so it is expected to increase the number of visitors who come. The method used in designing this shelter facility uses the SCAMPER method to adjust the shade facility product by mapping the location of Bandung City Square.
