

ABSTRACT

The potential of Bandung city tourism is very promising to improve the welfare of residents around the city of Bandung, one of the attractions that is quite well known in the city of Bandung is Bukit Moko. This hill is the favorite of many tourists in and outside the city of Bandung. How not this location presents a beautiful natural feel, especially at night this place provides the beauty of the night view in various corners of the city of Bandung with sparkling urban lights. But behind all the difficult access to the beauty of the main problem of this tourist area, the geographical location in a steep area makes the road access steep and many broken curves so that enough to affect the safety of the tourists, the steep terrain also often makes four-wheeled vehicles strike and do not strong uphill. Not infrequently also often occur both single and multiple accidents. From this problem, a topic was raised that a solution was needed in terms of transportation facilities at the location and terrain in the area of the star hill, cable car or also called cable car could be used as a solution idea for the solution to the problem. With the design knowledge, the writer is expected to be able to explain clear concepts about this idea so that it is possible to become a solution to the existing problems.

Keywords: Cable Car, Travel, Bandung.
