The city park is a green open space (RTH) of open land that functions socially and aesthetic as a means of recreational, educational or other activities at the city level. Park in Bandung city is one of the visitors' attractions to travel, especially the City Hall Park Bandung, which has a strategic location and has complete facilities, one of which is the mini zoo. But mini zoo in Bandung City Hall Park is less interesting visitors and absence of interaction between animals and visitors. One animal that usually attracts the attention of children is a rabbit. Judging from the data that there are children is majority of visitors to Bandung City Hall Park but very lack of interaction towards the rabbit. Therefore development must be done on the mini zoo at Bandung City Hall Park, one of them by designing a rabbit cage equipped with an interactive area between rabbits and visitors. The rabbit cage is specially design so the attraction of mini zoo in Bandung City Hall Park by using aspects visual, material, and system. The methods used are qualitative and SCAMPER methods.
