

ABSTRACT

The development of products in Indonesia is a familiar thing, the development of its products can be said to be very rapid. In everyday life, humans can not be separated with cleaning products and dishwashers which takes quite a long time with equipment that is less supportive and hand washing.

The city of Bandung has a diverse culinary business, ranging from the cuisine of the archipelago to foreign cuisine. Especially in weddings are needed. Preservation activities at weddings located in Bandung carry out buffet activities in the morning, afternoon and even at night. It can be said that the activity of washing dishes without stopping is clean dishes come out, dirty dishes come back with all kinds and must be cleaned quickly. Washing dishes are generally done manually. The problem experienced by catering workers when washing dishes is the large number of dirty dishes that have to be washed and take a long time.

This results in catering workers having to work fast and need a dishwasher with an automatic system so that washing dishes can be done more quickly, practically and does not take long.

Based on the above problems, as a designer it is expected to be able to help solve the problems experienced by catering workers, so as to be able to reduce labor and be more effective in doing dishes and product needs in accordance with dishwasher design for catering in Bandung with a visual aspect and system.
