

ABSTRACT

Gasibu Field is one of the tourist areas and sports facilities in the city of Bandung, located on Diponegoro street, Citarum, District. Bandung Wetan, Bandung City, West Java. As one of the places that Bandung residents are interested in both on weekdays and holidays. Starting from simply enjoying the food available around Gasibu Field, taking pictures, exercising or just relaxing. However, the available facilities are very lacking, for example the absence of safe and comfortable luggage storage facilities for visitors to the Gasibu Field. From the lack of these facilities, a decision was made to assist visitors to the Gasibu Field to store luggage safely and comfortably. Design a convenient storage locker such as adding a canopy to the locker so that the locker can be protected from the sun's heat and rain. This time the design uses the observation method and uses several data collection techniques by observing, approaching, interviewing and looking for data from existing books and journals.
