The purpose of this proposal writing is to explain the process of designing a place of processed waste products in the Mount Puntang area of West Java. The background of this writing is waste management in which the public does not understand the importance of protecting the environment from waste in that case it will apply the correct waste management until it can be re-used, in this case it will design the results of waste processing with prioritizing the design in a material way and also in the form of molds that are used as a container for processing waste products that have been processed from the beginning to the final results. This helps residents around the mountains, especially Mount Puntang to know that the results of the plastic waste used and create processed products that can be developed back into a new type of material in this case must first understand the process of the place where the processed or molded results of waste processing, with mold form that can be used to process the results of processed waste that has been processed from the beginning

Keywords: *waste processing, material and visual methods, mold form.*
