

ABSTRACT

The writing of this report aims to describe the process of designing a jewelry product using ingredients from saga seeds. As for the background of writing this report that jewelry models are increasingly developing and the shape is unique and interesting so that many people are interested in using it. Same is the case with interesting and many types of fashion. Besides that, there are also many out there who have products that are not just any product, in the sense that they are here, they prefer original products compared to non-genuine products because of the quality factor that is their consideration.

On this occasion the author has a product design that is designing jewelry by utilizing ingredients from seeds, one of which is saga seeds. Most people out there look at the grain with one eye and even just throw it away, even though if the seeds are re-processed it will be something useful and has a sale value, one of which is as material for jewelry. therefore the writer here will make new innovations by utilizing ingredients from saga seeds to make jewelry that has a selling value for those who use it.

Keywords: *jewelry, saga seeds, utilization*
