

ABSTRACT

This design discusses the parks in Bandung City Historical Park with several aspects, namely visual aspects, material aspects, and system aspects. Historical Park is on Jalan Wastukencana no 2, Babakan Ciamis, Sumur District, Bandung. This park was once a vacant land overgrown with trees, then restored and inaugurated into the Historical Park on December 19, 2017. In this park there are several facilities, including jogging areas, swimming pools, park lights, trash cans, information centers, security departments, toilets, hero biographical monuments, and park benches.

This design uses a qualitative method in which this design uses research that illustrates, and uses analysis. This design uses data collection techniques to make it easier to get data from the field with the method of interview, observation, literature, and documentation. Designer field observation, directly to find out activities and look for problems in the Bandung City Historical Park. The literature data used is sourced from several journals that contain problems, as well as several books with related theories that support and facilitate the design of this park chair. facilities available at the Historical Park.

The results of this design show that visitors who come to the benches available at the Bandung City Historical Park are not integrated with the table, making it easier for visitors who like to eat, make it less effective, and the design of the bench that feels less comfortable to use. Thus this design leads to garden design that is designed with a table design and has a comfortable design.

Keywords: *City park, bench design, park bench*
