

ABSTRACT

In social life, especially in Indonesia, problems that are often encountered are problems regarding waste. Waste is a material that is wasted or discarded from a source of the results of human activities and natural processes that have no economic value. The purpose of this product design is to be able to design garden bins in the Visual and Material aspects, can be applied in parks that have a lot of frequency in the disposal of dry and wet waste (organic and non-organic) and can reduce environmental pollution around the trash, especially in the gardens.

The trash can that we have designed uses wood and aluminum material using a hinge system. This product is designed to maintain cleanliness in the City Park of Kiara Artha Park. It is hoped that all visitors to Taman Kota Kiara Artha Park can be more aware of environmental cleanliness.
