

ABSTRACT

Green Open Space is a supporting space for the Region or region because of its very vital functions namely Area Security, Controlling Pollution and Destruction of Land, Air and Air. One of the parks in the city of Bandung, namely the Kiara Artha park which is designated as a thematic park with historical history, is supported by facilities that are equipped at the beginning of opening a park consisting of a place to sit, sculpture, and a statue below to reinforce the theme of this park. However, this Artha Iara has some problems with some plants that are damaged to death, which are suspended by safety which takes care of the park and reduces the supporting facilities of the park in watering plants or management by aggravating access to air sources that can be used to water plants far apart, this has an impact to plant growth so plants will be vulnerable to death. Therefore this design consists of planting containers using a design agreement consisting of Ecodesign, namely design based on aspects designed to make planting container products that can support the ecology of planting so that plants can grow well and safely in planting containers and around planting containers because lack of irrigation.
