

ABSTRACT

The cable car is a transportation that does not use exhaust emissions and makes fuel efficient transportation because it uses electricity. Cable car is one example of a useful transportation facility for the solution of congestion around the city of Bandung or can be an object of tourist attraction. Therefore, cable car has the opportunity and competes with other transportation such as buses, trains and other transport vehicles. The design of this chairlift chair product is in accordance with the criteria for ergonomic aspects.

Keywords: cable car, chair, ergonomics
