

ABSTRACT

Bandung as one of the most populous cities in West Java. The most populous happen because Bandung city has been reached the highest enhancement in 2013 – 2019 with presentation 0.45% each year. Those enhancements happen because some factor is urbanization, growth and death number so they need some facilities for support the cities is Mother and Child Hospital. The project will be Melinda Mother and Child Hospital 1 Bandung. The problems contained in efficiency service, amount of space, privacy level and safety of the patient. The method that used is obtained from the data collecting process, documentation, analysis of design in order to get the problem from Melinda Mother and Child Hospital 1 Bandung. The purpose of this project is to redesign Melinda Mother and Child Hospital 1 Bandung to governance the location of the room to adjust with the standard and build provide comfort for the patient, especially for mother and children. The expected outcome of this design is to create a new design with a “Family-Centered Environment” theme and the concept of a “warm” space to answer the problems that exist in the old design.

Keyword: Redesign, mother and child hospital, Centered Environment.
