

## ABSTRACT

---

*Vehicle tracking system is a security system that is often used in the transportation sector which aims to determine the position or location of the vehicle when the vehicle is used. Therefore, a new feature was designed for the vehicle tracking system by adding more checks on the remaining vehicle fuel, vehicle speed, and it can be viewed via the website page online. Which aims to monitor the use of vehicles on a regular basis or can be called the monitoring process.*

**Keywords :** *Security, website, monitoring*
