

ABSTRACT

Digital Village is one of the new construction and management strategy, this concept emerged and develops with the evolving era and technology. The digital village is considered as a village capable of using human resources and the Modern telecommunication infrastructure to further improve sustainable economic growth and higher quality of life. The digital village is designed to help various activities in accessing information that is difficult to access by the public such as periodic information including organizational structure, vision and mission, village APBD information, expenditure and village income. Information at all times includes information about news or disaster investigation data and the Sertamerta information includes information that could threaten the life of the crowd and public order that are constrained by less time to access the information. This research uses a descriptive analysis of Degan conducting interviews to Sukapura village where the results can be in the know bring the disclosure of information in the village today is insufficient masi in the digital era at present, the purpose of this research is to build a WEB-based application that can facilitate the community in accessing information about the village and minimize the management of information and data contained in the village.

Keywords: Digital village, Public information, Sertamerta Information

Periodic information, Information at any time.
