

ABSTRACT

APPLICATION OF POINT OF SALES "AGRICULTURE" RETAIL PROCUREMENT MODULE OF GOODS is an application that is used to help the process of managing transactions of goods in and managing data of goods and suppliers. Every year it manages data management and data recording manually and technology has not been touched in terms of recording and storage. The processes contained therein must be managed in detail and clearly. But sometimes this is an obstacle in management because there is no integrated technology with each other that can facilitate officers in terms of management and recording. This application can handle the process of managing data and recording data systematically. This application was built in the website version using the Waterfall method, using the MySQL database and CodeIgniter Framework (CI). With the development of this application, it can assist officers in managing data and data recording.
