

## ABSTRACT

---

*Goods management is something that must be really considered in detail, both when the goods enter, data updates or other activities. Correct data collection will produce valid information. The Investment and Integrated Service Department in Bandung Regency is an element of implementing regional government affairs in the field of Investment and One Stop Integrated Services. In managing its activities, DPMPTSP experiences several obstacles such as recording data that is still recorded in Excel, there is often a data error regarding the amount of goods available in the warehouse and in Excel. In this study, the method used is the waterfall method which has 5 sequential steps, namely: needs analysis, system design, implementation, system testing and system maintenance. So if there are weaknesses and strengths in this application, development will continue to be carried out.*
