ABSTRACT

Save's Photo Studio is a photography business that was founded in 2015. There is a process for ordering goods and/or photography services that occur between customers and employees that must be recorded to be able to use the services in Save's Photo Studio. The vision that wants to be built on Save's Photo Studio is to be able to develop Human Resources Development and intellectual intelligence in the science of photography, meanwhile, the mission of Save's Photo studio is to serve customers with hospitality, build a discipline, professional attitude, honesty, responsibility, and innovating in creating new works. To serve customers better, a system updates are needed which are expected to help the main process in Save's Photo Studio. Other than the functionality of ordering added by the employee, there is also booking functionality for customers so that customers can book in advance if it is needed. The process of making this application uses the Waterfall model. The programming language used is PHP with CodeIgniter framework and the database using MySQL.

Keywords: Ordering Application, Photo Studio, Booking, Waterfall Model.
