

ABSTRACT

The Lampung Regional Library and Archives Service is responsible for organizing library affairs in Lampung province. In reality the physical visit to Lampung Dispusipda has not met national standards, the overall function of the library has not been carried out optimally, and the completeness of public facilities at Lampung Dispusipda has not met the National Library Standards. The result of this is that Lampung has a low literacy level measured on a national scale.

The purpose of the Lampung Regional Public Library Design is to provide public library facilities that meet national standards, and make the library a public space that accommodates community interaction, and creates a library that has a inclusive design concept to attract visitors. The methodology used in this design is field observations and literature studies. With this design, it is expected that library, social and design problems can be solved to create regional libraries that meet the needs of the community.
