

ABSTRACT

The need for fast, precise and accurate information is indispensable in the current information Era as one of the material decision making. In the management of the data, of course, requires a system capable of accommodating and managing data automatically such as Dashboard. Thus making it easier to search for data if at any time the data is required. The project is focused on personnel data that exists at Telkom University ranging from lecturer, educator to position formation. The purpose is to present relevant and accurate data with a design that is attractive and easy to understand by users. The Resulting Output is a graph of numbers and tables according to the needs of the campus, especially the executive, so it can help Telkom University in improving the strategy programs and quality assurance of the institution.
