

## **ABSTRACT**

Bandung as the Capital of West Java Province has a dense population. Besides storing a lot of natural beauty, Bandung is also known to have attractive tourism potential. However, the thing that has been overlooked is that Bandung also has a potential for disaster. Bandung also has an active fault known as the Lembang Fault which is located near residential areas, if natural disasters occur then refugees must be provided for victims of natural disasters, in the evacuation area too many needs must be met to meet the needs of the displaced victims of disaster. The victims also need the media to store goods to store personal belongings to avoid losing items due to theft.
