Ice skating and bowling are two recreational sports that are starting to develop rapidly in Indonesia today. People began to enjoy this sport because both of them are fun and healthy recreational sports so that there are many enthusiasts and athletes. Proved by the amount of athletes on ice skating that reached 431 people and athletes on bowling that reached 132 people at this time and also public facilities that never lack of visitors. The increasing number of enthusiasts and athletes in ice skating and bowling has an impact on increasing need for sports facilities and infrastructure facilities, especially in Kota Bandung. Because of the limited recreational sports facilities, the activity of enthusiast and athletes is inhibit. Couple with the athletes of disability who have difficulty practicing because not all of the facilities has good standards for users with disabilities.

This design prioritized public spaces with recreational sports facilities that can be fulfill ice skating and bowling enthusiast and athletes needs. This design is also prioritized public spaces that can be fulfill the target like the absence of private room for athletes and fulfill good standards for disabilities. This design has dynamic movement concept with form programmatic. The result of ice skating and bowling public space is made with consideration to facilitate all of the activity of ice skating and bowling.
