

ABSTRACT

Soreang Regional General Hospital is further abbreviated as Soreang Hospital is one of the Government Hospitals located in Bandung regency which was established in 1996 and is the development of DTP Soreang Health Center on the basis of the Decree of the Regent of the Regional Head. Management on patient data per treatment room can be said not to be maximal because the hospital is still difficult to know the status and history of the treatment room including the bed that is in this final task the author will create an application that can monitor or monitor the transaction recording of each bed in the treatment room, and can also recommend the treatment room to be used by prospective patients. In the design process it is explained using Rich Picture and Business Process and Model Nation, and using a MySQL-based database, as well as in the testing process using the black box testing method.
