ABSTRACT

AWS Textile is one of the sarong weaving factories that have been established since 2011. The factory with this type of home industry business is located in Kp. Sadang No. 31 Desa Sukamantri - Majalaya. Each week, the AWS Textile is capable of producing 70-80 scores or around 1,600 pieces of woven sarongs. The sarongs have been distributed to many shops in West Java.

Along with the rapid development, product sales are increasing, supply of raw materials also increased so that employees are overwhelmed in managing and recording data and often wrong in the calculation of goods for the next period. As a solution, a Warehousing Management Application is made that is expected to help employees at AWS Textile in managing and recording data of warehousing and production at the factory.
