ABSTRACT

Al-Fath Inc Convection is a manufacturing company engaged in the manufacture of clothing and pants convection located on Jl. Cikoneng No. 50, Bojongsoang. In Al - Fath Inc convection, the process of calculating production costs is still manual using books and does not comply with accounting standards, causing production costs to be less precise. To overcome this problem a web-based application was built using the PHP programming language and the CodeIgniter Framework. This application has functionality calculating the cost of raw materials, labor costs, and factory overhead costs as well as producing calculation of production costs using the job order cost method, and produce accounting reports such as journals, ledgers, reports on production costs, and job order cost sheet. This application was designed using the System Life Development Cycle (SDLC) method. And application testing uses the Black Box Testing method.

Keywords: Job Order Cost, Production Costs
