

## ABSTRACT

---

*Campaign according to the KBBI is a movement (action) simultaned (to fight, to take action, etc.) in this case the campaign is intended to hold an action that is social action to our life in need. While donations are activities where we give something to other people in the form of goods or money both to individuals and groups. Nowadays, almost everything can be accessed online. And in the Application of Donation of Web-Based Goods is one of the donation applications in the form of goods, with this application goods that are considered unused but can be useful, can be donated to people who are more in need. The purpose of making this application is to facilitate the recipients of donations in creating campaigns or campaigns for victims or people in need. This application was built using the PHP programming language, with the CodeIgniter framework and using the MySQL database and Blockchain Technology as a tracking feature for the use of donation funds. The application development method uses the Prototype methodology.*
