

ABSTRACT

This final project aims to make applications regarding content management and tourism events in the city of Bandung. This application was made because there are so many tourist events that are not widely known by the general public, therefore this application was built as a medium for delivering information to the wider community about tourist events in the city of Bandung. This application development uses the PHP programming language and Sublime editor tools. With this application, it is hoped that it can assist tourists in obtaining information and conveying opinions regarding existing events and festivals.
