

## ABSTRACT

---

*Sukapura Village is one of the villages in Bandung Regency. The author took a sample of the Sukapura village for the final project. At the Sukapura village office serving various services including serving all reporting and aspiration from local residents who operate during business hours at 8:00 a.m. 16.00 However, due to limited space, staff and personnel, not all residents can complete it on time. So it was made a web-based complaint digital village application. This application helps the community to be easier in issuing their aspirations. This application is a web-based software application using the language of the PHP program with the Code Igniter framework, and using MySQL as a data storage media. This application specification uses the waterfall method. Successful public complaints will be saved automatically in the database. Later there are three users of this application there are residents, administrator and a chief.*
