

ABSTRACT

This paper is intended as a report on the Design of a Burning Place with Material Aspects for Outdoor Activities that the author did to meet the TA requirements. The purpose of this study is to change the habits of the visitors at the Ranca Upas tourist site who burn wood indiscriminately and cause prosa on land and air. The design of this wood kiln aims to make it easier for users to carry out wood burning activities and reduce waste due to the wood burner itself.

Keywords: Wood Burning, Soil Pollution, Air Pollution
