

ABSTRACT

Practicum Management Student and Practical Administrator Module is developed to help the practicum administration activities for admin and practicum learning activities for the students. These administrative activities are the management of lecturer data, practicum assistants, practicum, and practicum schedules. After administrative management is carried out, practicum activities will take place according to the schedule that has been made. Students have to attend and collect assignments in practical activities to get the evaluation score given by the practicum assistant or lecturer. The task collection schedule that is set by the system ensures that the practitioner cannot send the assignments past the allotted time in order to maintain the practicum rules. This application is developed with purpose to manage the administration data for admin and assignment for the students. The Application development is using prototyping method, web-based with the PHP programming language and CodeIgniter as framework, and MySQL as a database.

Keyword: Practicum, Admin, Student, Task
