ABSTRACT

PT. Kharisma Radja is a trading company engaged in LPG gas section that has many employees. employee salary problems are a problem in managing work hours and salary calculations are based on income tax article 21. This makes the company and employees troubled, because all accounting recording activities are still stored manually using Microsoft Excel. in recording employees of PT. Kharisma Radja always occurs in the name of the employee inside recording employee names. Then it needs a web-based application that is able to handle accounting standards and employee data storage, with something that has been determined. The application that will be made by using the object-oriented programming concept in PHP language and the program coding phase that is using the CodeIgniter framework with the MySQL server that will be tested in black box texting
