

## ABSTRACT

*In educational institutions this information system aims to promote or provide an overview of the educational institution concerned, administration, and other facilities. Tiara Bunda elementary school is one of the schools which is located in the Batununggal complex, Bandung, in providing school information it is still done manually, namely socializing and interacting with the wider community such as school profiles, student data, teacher data, and lesson schedule information.*

*In this final project has been design and create a web-based school profile information system at Tiara Bunda Elementary school. This system is equipped with school profile information, school facilities, school performance and school documentation that can provide an overview of the school. So that parents can choose schools for their children from an early age. This system uses the JavaScript, NodeJS, ExpressJs and MySQL as the database.*

*The result of this final project is a web-based school profile information system at Tiara Bunda Elementary School with performance test of system's fuction is 100% can work properly.*

**Keyword:** *School, Information System, Website, NodeJS, Expressjs, MySQL.*
