

ABSTRACT

Education in these day is very important things, some eople admit barchelor degree is not enough. But the cost for continuing education to take a highes degree is very expensive. Therefor, scholarship exist to help anyone hwo have difficulties in terms of money to continue their education. However people also having trouble to obtain an information about scholarship. Which makes people prefer the regular path or complete the barchelor degree. Therefor in this final project a mobile application will be made, as a media of information for students in finding informations about scholarship, which is expected to be able to facilitate students in finding scholarship information. This application will be designed withn an attractive and easy-to-use user interface, to make it easier for users to find scholarship information, as well as provide a way to register. To support this research, data collection will be done by interviewing submission of applications, interviews with students, questionnaire, and library study.
