

ABSTRACT

Application Profiling Test Self Inventory Psychology is a web-based application that discusses about psychological tests. This application take a study case in the Faculty of Applied Science, Telkom University Bandung. Psychological tests have existed before, but because the test fees are quite expensive so they are no longer applied. Because it's no longer applied, the guardian lecturer can't know the personality or intelligence of student for their future careers and students don't yet know their intelligence or talent. This application was built to help lecturers and students to record and know student psychology such as self potential, intelligence, personality types, interests, and talents. Making this application using the Waterfall method and using the PHP Framework CodeIgniter programming language and MySQL database. The results of the application can help lecturers to record and recap the results of test and student in recording the result of tests conducted.
