ABSTRACT

Abstract-CV Mitun Production is a manufacturing company that manufactures T-shirts. At present, the recording of transactions in CV Mitun is still manual and has not been integrated, there is no card stock making, and no financial reports have been made specifically for raw material purchase reports. Therefore, a web-based application is created to install purchases of raw materials for t-shirts and card stock. This application was created using the CodeIgniter framework and MySQL database. The functionality of this application is a general journal, general ledger, purchase reports, and purchase return reports.
