*The impact of synthetic dye caused natural dye widely applied as alternative textile coloring in Indonesia. This matter was supported by government for Indonesian society, especially fashion industry to utilize the natural ingredients as eco-friendly coloring textiles. Batik Remekan is one of the various Batik that have a characteristic of cracking pattern caused by the cracks after kneading the fabric covered wax.. Cracking pattern usually acted as side pattern for block printed oand hand-drawn batik. This research aimed for finding an alternative eco-friendly resist dye textile using batik remekan visualization which processed as main pattern. The method uses for this research is experimental method with qualitative data collective in the form of literature studies, observation and exploration. The result of this research applied into ready-to-wear fashion using Soga Tingi natural dyes and natural fabric.*
