

## **ABSTRACT**

*Virtual Reality (VR) is a technology that combines three-dimensional (3D) objects combined with hearing and vision that produce user effects as if they are in a virtual environment. With the development of technology as it is today, a new technology has been created, namely virtual reality. Virtual reality is a technology that allows us to interact with objects of imagination by using computers and displaying a 3-dimensional atmosphere that seems real. Virtual reality technology has also been widely used in the game world. Game is one of the entertainment media that is the choice of the community to eliminate boredom or just to fill their spare time. In addition to being an entertainment medium, games can also be a learning media to improve one's brain development. In this study, we will discuss archery games using virtual reality (VR) devices on archery virtual reality.*
