The use of public transportation is now more desirable for tourists to move from one area-to another due to consistent punctuality as well as ease of access to its integrity. In connection with the establishment of the West Java Kertajati International Airport in Majalengka, the government continues to build facilities and infrastructure for mass transportation to support the convenience of users to access the airport with the trains.

Ciroyom Station is one of many stations in Bandung that has great potential to become an integrated train station with an airport, stands on a land area of $\pm 26,000m^2$, located at Jln. Arjuna, Ciroyom, Andir, Bandung. Given the Bandung City Station that already does not have enough capacity to accommodate more passengers. The design of this station raises the theme "Local Source" with concept "Attractive". Coupled with an approach that promotes Tradition and Contemporary Lifestyle Harmonization, as an effort to create an interior atmosphere that can represent the local culture and create a balance between culture and support of technological advances in the station.

Keywords: *Train Station, Airport, Cultural and Contemporary.*
