

ABSTRACT

INTERIOR DESIGN OF CIREBON CITY COUNCIL OFFICE

In this modern era, the interior is growing rapidly to support public facilities and the arrangement of a room, one of which is an office building. Currently there are many offices that pay attention to the condition of the interior, because indirectly the interior is very influential on the activities and performance of employees or people with an interest in the office. This design will be re-designed at one of the regional government offices, the Cirebon City DPRD office, at Jalan Siliwangi Street No. 109, Kebonbaru, Kec. Kejaksan , Cirebon City, West Java. The understanding of the DPRD or the abbreviation of the Regional Representative Council itself is a regional people's representative institution that is domiciled as an element of regional government in the provinces / districts / cities in Indonesia. DPRD is mentioned in Article 18 paragraph 3 of the 1945 Constitution "The provincial, regency, and city government has a Regional People's Representative Council whose members are elected through general elections". DPRD is then regulated further by law, most recently through Law Number 17 of 2014.

The design of the Cirebon City DPRD office is the aspiration of the temporary leadership of the Cirebon City DPRD which represents the aspirations of the legislators for the 2014-2019 period, where there is a lack of facilities to support the performance of the council. In view of these problems, that the lack of party faction workspace facilities and interior problems are less representative so that the faction meeting is conducted in the commission room. Besides the lack of activity space, based on a direct review of the office that the lack of lighting in the interior of the office and in terms of aesthetics is very lacking. For this reason, these problems become considerations in optimizing the running of the government.

Based on the above problems it can be concluded that the Cirebon City DPRD office needs the development of work space for the party faction in order to optimize performance and meet other supporting facilities in terms of interior or supporting media for running activities at the Cirebon City DPRD office as a convenience in carrying out their duties. In the design of the Cirebon City DPRD office, it uses an approach to the culture of Cirebon city with a modern concept so as to create an atmosphere that is not rigid. To get maximum results, several methods in design are carried out, namely: 1) observation / survey methods in

the field, interviews, and literature studies. 2) analysis method based on data obtained from the field, analysis on books, internet, and references from other sources. The method aims to make it easier to solve interior problems at the Cirebon City DPRD office with accurate results, so as to get the maximum goals according to the needs and comfort of the user.

Key words: workspace development, cultural approach, performance needs and comfort.
