According to the statistical central body, Bandung is included in the City which has a population density, and has an increase in the population of about 1.43% every year. But there are still 29 cases of maternal and neonatal deaths in 2018 (<http://data.bandung.go.id/>). So that people need health service facilities specifically for pregnant women and children. The main midwifery clinic is an important facility in each area, therefore an appropriate design is needed in the design of this main obstetric clinic. The HARKEL midwifery main clinic in the area of Bandung is a redesign project. By conducting data collection methods in the form of secondary data and primary data so that synthetic problems can be drawn. As well as using an activity and behavior approach that aims to provide interior design that suits the user by thinking about government standardization. Through the impression of space that is adjusted to the design theme of "Digitalian Expression" so that it is expected that the re-design of the HARKEL midwifery main clinic will give a comfortable, safe and positive feeling so that it can accelerate recovery.

Keywords: Obstetrics main clinic, activity and behavior, Digitalian expression
