

ABSTRACT

Indonesia as one of the largest archipelagic state in the world which requires water transportation facilities and infrastructure that is a port. Port is one of water transportation infrastructure that located in the sea, in rivers and in lakes to connect with a land area to accomplish certain goals. Port as a gateway have passenger terminal facilities for port managers and passengers. One of them is Muara Angke Port which serve a cruise to Kepulauan Seribu and otherwise. As a gateway to Kepulauan Seribu, Muara Angke Port Passanger Terminal has not described the characteristics of the Kepulauan Seribu, Muara Angke Port Passanger Terminal does not yet have port facilities that according to government standards. Irregular circulation grooves, uninformative signage, interior design elements are not varied becomes a problem in terminal bulding. Adding port facilities and proper design planning to solve the problem, can be achieved by designing through a metaphor approach.
